

Tidewater Trailers

Thank you for purchasing a Tidewater trailer. With proper use and care it will provide you with many years of use. Before you use your trailer, please read the documents in this package and check out the “Tidewater Trailers Operations Manual” on our website, www.tidewatertrailers.com/news.html, which contains instructions on the use and care of our trailers. Familiarize yourself with the adjustments and operations of the trailer prior to loading a boat onto it. We use high quality Lucas marine grease in the wheel bearings. They should be inspected and repacked, if necessary, twice a year with compatible grease. See the manual above for grease specifications. Information regarding axles, hubs and braking system components used on our trailers can also be found on our website.

Information relating to the capacity of the trailer can be found on the Certificate of Origin and/or the frame sticker on the left front frame rail of the trailer. This information should be filled into the appropriate spaces at the bottom of this document. An explanation of this information is as follows:

Model: model number of the trailer

VIN: vehicle identification number of the trailer

Year: model year of the trailer

GVWR: maximum allowable combined weight of the trailer and boat

Shipping Weight: unladen weight of the trailer

Name of Dealer: dealer to whom the trailer was originally delivered

The weight capacity of the trailer can be found by subtracting the **Shipping Weight** from the **GVWR**. Attempting to load a boat heavier than this will void the warranty and could result in failure of the trailer frame and/or damage to the boat.

Model: _____

VIN: _____

Year: _____

GVWR: _____ lbs.

Shipping Weight: _____ lbs.

Weight Capacity: _____ lbs. (GVWR - Shipping Weight)

Dealer Name: _____
